After graduating Kansas State University in 1993 with a degree in Architectural Engineering, I spent the first 16 years of my career in Colorado Springs. I am currently the Senior Electrical Engineer and Electrical Section Chief for Omaha, Des Moines and Lincoln Offices of Farris Engineering. I am responsible for the design of electrical systems and quality control. I have designed all facets of electrical systems including fire alarm, security systems, electrical distribution systems and lighting. I have been involved with several LEED gold and silver projects. I am responsible for the design of several hospital projects for the Veterans Administration, many different project types for the Corp of Engineers, various labs, technical buildings and dorms for Community Colleges and Universities and educational facilities. I currently serve on the Board Of Directors at Farris Engineering.

I have been married for 13 years and have two boys, 11 and 9. My wife Amy is currently a homemaker and volunteers at the boys schools and at Church. The boys enjoy Scouts, basketball and baseball. I enjoy flying, playing golf and camping. At my church I have served on the Board of Elders and am currently serving as the president.
