I am currently the Chief Electrical Engineer at M.E. Group. I have worked in this position for the past year and a half. I started in the industry in January 2000, just after graduating from K-State with a BS in Architectural Engineering. In my almost 17 year career, I have designed electrical systems for hundreds of buildings in many market sectors over much of the United States. One of my roles at M.E.GROUP is helping lead the Nebraska design divisions, including Lincoln and Omaha. I truly enjoy mentoring younger staff while striving to grow the company and my career and solving the 1% problems.

I am blessed enough to have 3 awesome daughters, 12, 8, and 18 months and a wonderful wife of 17 years. My wife and I are both natives of Seneca Kansas and graduates of K-State. We live near Murray, Nebraska on a small farm in a relatively new home that my wife designed and we built together. My wife is an Architect who works for Kenneth Hahn Architects. I enjoy being involved with growing things, ranging from kids, garden, livestock, crops, woodworking projects, business, or whatever I may be working on in our shed. I love to spend spare time (which doesn't happen often) fishing, hunting or shooting.
