As a senior engineer in the environmental consulting industry, I've spent over 20 years conducting environmental site assessments, hydrogeological studies, and corrective action/remediation design and implementation. As a supervisor and manager I'm privileged to spend my time working with a great group of engineers and scientists evaluating our environment and working to remediate issues. Whether it's overseeing field staff, conducting senior review of project documents, or designing an innovative solution to a challenging problem, I thoroughly enjoy my work. There's a new problem to solve or challenge to overcome on an almost daily basis. One day I might be working with a developer to fulfill their environmental due diligence requirements, such as a Phase I environmental site assessment or limited site investigation, on a multi-million dollar development and the next day I can be working with an industrial client to clean up soil and groundwater that has been impacted by chemicals released to the environment during the early 1900's. I have a bachelor's degree in Engineering and Public Policy from Washington University in St. Louis and am a licensed professional environmental engineer.

My wife, Stacey, and I have two girls: a freshman at Millard West and a 7th grader at Millard North Middle. Both are active in dance. I am a member of several clubs at the German American Society of Omaha including the home brewer club and smokehouse rotisserie crew for the annual Maifest and German Day/Oktobefest celebrations. In my remaining free time I enjoy smoking various meats while enjoying craft beers and playing video games.
